Every error is a designed state

One screen per error code from the contract. A spinner that never resolves is not a state.

404 SUBSCRIBER_NOT_FOUND

No bill found

We couldn't find a subscriber with that number at Cairo Electricity. Check the digits on your bill.

Edit number

409 BILL_ALREADY_PAID

Nothing due

This bill was already settled on 12 Sep 2026. No payment is needed.

View that receipt

410 INQUIRY_EXPIRED

Quote expired

Bill amounts are only held for five minutes. Run the inquiry again to get a fresh total.

Check again

402 INSUFFICIENT_BALANCE

Payment declined

Your wallet balance is below 253.20 EGP. Nothing was charged.

Top up and retry

503 SERVICE_UNAVAILABLE

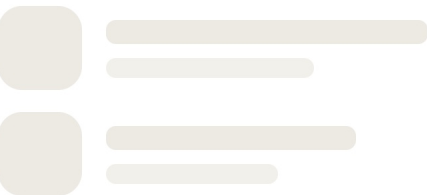

Provider is down

Cairo Electricity isn't responding right now. Your money has not moved.

Try again

LOADING

Skeleton rows, not a centred spinner — the layout must not jump when data lands.

Build spec

Both apps implement these same tokens. If iOS and Android disagree on a number, this board decides.

COLOR

	Primary Actions, active tab	#B23A2F
	Ink Primary text	#14203A
	Ink muted Labels, captions	#5A6780
	Success Paid, receipt header	#12705A
	Warning Offline, pending	#8A5A12
	Danger Declined, expiry	#A62B20
	Ground / Surface Screen / cards	#F6F3EE

SPACING & SHAPE

4-point scale: **4 • 8 • 12 • 16 • 22 • 28**. Screen gutter 22. Card gap 10.

Radii: field & card 14–16, button 16, sheet 28, pill 999. Touch targets never below 44.

TYPE — IBM PLEX SANS ARABIC

Screen title 26/700

Section header 19/700

Row title 15/600

Body and secondary copy 13.5/400

CATEGORY LABEL 12/700

253.20 Plex Mono

Every amount, reference and subscriber number is monospaced so digits align down a column. Arabic and English share one family, so a bilingual row never changes height.

THE PAYMENT FLOW

- 1 Pick a service from the cached list
- 2 Subscriber number → `encrypt` → inquiry
- 3 Server quotes a total, valid 5 minutes
- 4 PIN → `encrypt` + idempotency key
- 5 Receipt, saved to history

The same key pays twice only if the client sends the same idempotency key — and then it gets the same receipt back, not a second charge.

RULES BOTH CLIENTS FOLLOW

- ✓ Amounts arrive as integer piastres. The client divides by 100 only to display.
- ✓ Every list renders from the local database, never straight from a response.
- ✓ Errors switch on the contract’s code, never on message text.
- ✓ Service names show in both languages; the app never guesses a translation.
- ✓ An unavailable service is visible and disabled, not hidden from the list.

COMPONENTS

	h56 in screens, full width
	1px border, no fill
	Never a hidden button
	Border #14203A on focus
	Message below, never a
